SUMAIYA AHMED

sumaiyaahmed999@gmail.com | (+88) 01772800250

Github: potate4 | Codeforces: ashyn | LinkedIn: Sumaiya Ahmed

SKILLS

- **C, C++, Qt**
- **Java, JavaFx & Scene builder, Spring Boot, Vaadin-Flow**
- **Python, FastAPI, LangChain, OpenAI, Gradio**
- **SQL, PL/SQL, MongoDB, PostgreSQL**
- **NodeJS, ExpressJS, ReactJS**
- **OOP, Github, Docker, Competitive Programming**

EDUCATION

- BSc. in CSE - Islamic University of Technology (IUT), Gazipur **|** *CGPA*: *3.99, Expected Graduation: September 2026*

ACHIEVEMENTS

- Codeforces Max Rating (1300+, pupil)
- IUT Intra Girls' Programming Contest - Best Performer (First Year, 12th overall)
- National Girls' Programming Contest (NGPC) - 34th
- National High School Programming Contest - 19th
- Regional High School Programming Contest - Champion
- Regional Math Olympiad - 3rd
- Finalist for the Kennedy-Lugar YES Exchange program, Alumna at the US Department of State

WORK EXPERIENCE

SOFTWARE ENGINEER | OLEYN.AI ***January 2025 - Present***

- ➢ **Designed and built** an AI-driven automated phone call system from the ground up. The system enables organizations to create campaigns, where the AI sequentially calls customers, informs them about offers, and forwards calls to agents using **OpenAI's real-time API and Twilio Voice**. Integrated **Faktory for job management**. Built using **FastAPI**, **PostgreSQL,** and **React.js.**
- ➢ **Developed a full agentic AI pipeline**, allowing customers to **add custom functions**, **query products, place orders, and submit complaints** through chat interactions. Built the **entire system**, from backend logic to API wiring and frontend development. Integrated **SSLCommerz** for secure payments. Built using **FastAPI**, **PydanticAI** framework, **PostgreSQL,** and **React.js**.
- ➢ Integrated a **content-creation** system for social media that **automatically** generates daily posts for up to a month based on user-input topics, with customizable templates and image attachments.

AI ENGINEER | JANATA WiFi ***June 2024 - Present***

- ➢ **Developed and deployed a Financial Analyst bot** on Linux (NGINX); available on Telegram, WhatsApp, and Twitter to fetch live stock data, generate charts, and provide brief financial insights on user mentions using **Python**.
- ➢ Optimized retrieval stability by 20% in a RAG bot using **LangChain, OpenAI API, and CrewAI**, enabling **source citation, bilingual responses (Bengali & English), and document linking** for transparency.
- ➢ **Built a voice assistant system** integrated with a **SIP server**, allowing users to interact via voice calls in a call center-like setup using **LiveKit, LangChain, and OpenAI API**.
- ➢ **Researched and optimized ERPNext**, automating data entry with AI-powered image recognition, enabling automatic field population from uploaded images.

PROJECTS

- **CareerOS** - **AI-Powered Career Management Platform (Ongoing)** (github)
  - Developing a holistic AI platform for managing the entire career lifecycle. Built speech prosody, emotion, and semantic analysis using Parselmouth, DeepFace, and OpenAI/Gemini API for AI interview simulator segment.
- **EchoNav - Voice-Powered AI Navigation Assistant for the Visually Impaired** (github)
  - Developed a Flutter mobile app with Python backend, empowering visually impaired users through voice-controlled navigation, object/scene recognition, face-based authentication, task management, and real-time route guidance using Google Maps and Gemini API.
- **CrisisCompass - A disaster management webapp** (github)
  - Built a disaster management web app enabling admins to manage districts, authorities to place shelters, volunteers to assist, and users to find the shortest route to safety using the Google Maps API. Built using the MERN stack.
- **Healthmate - A chatbot application that provides medical advice** (github)
  - Collaborated on creating a chatbot that provides medical assistance and information to users, leveraging the MERN stack for robust performance and scalability.
- **JavaFX Projects**
  - Battleship Game - Developed a two-player battleship game using JavaFX & Scene Builder. (github)
  - PokeDex - Developed A Pokémon encyclopedia, using JavaFX, Scene Builder & MySQL. (github)
